

Symbolon

Private fixed-rate financing on Canton.

Repayment uncertainty

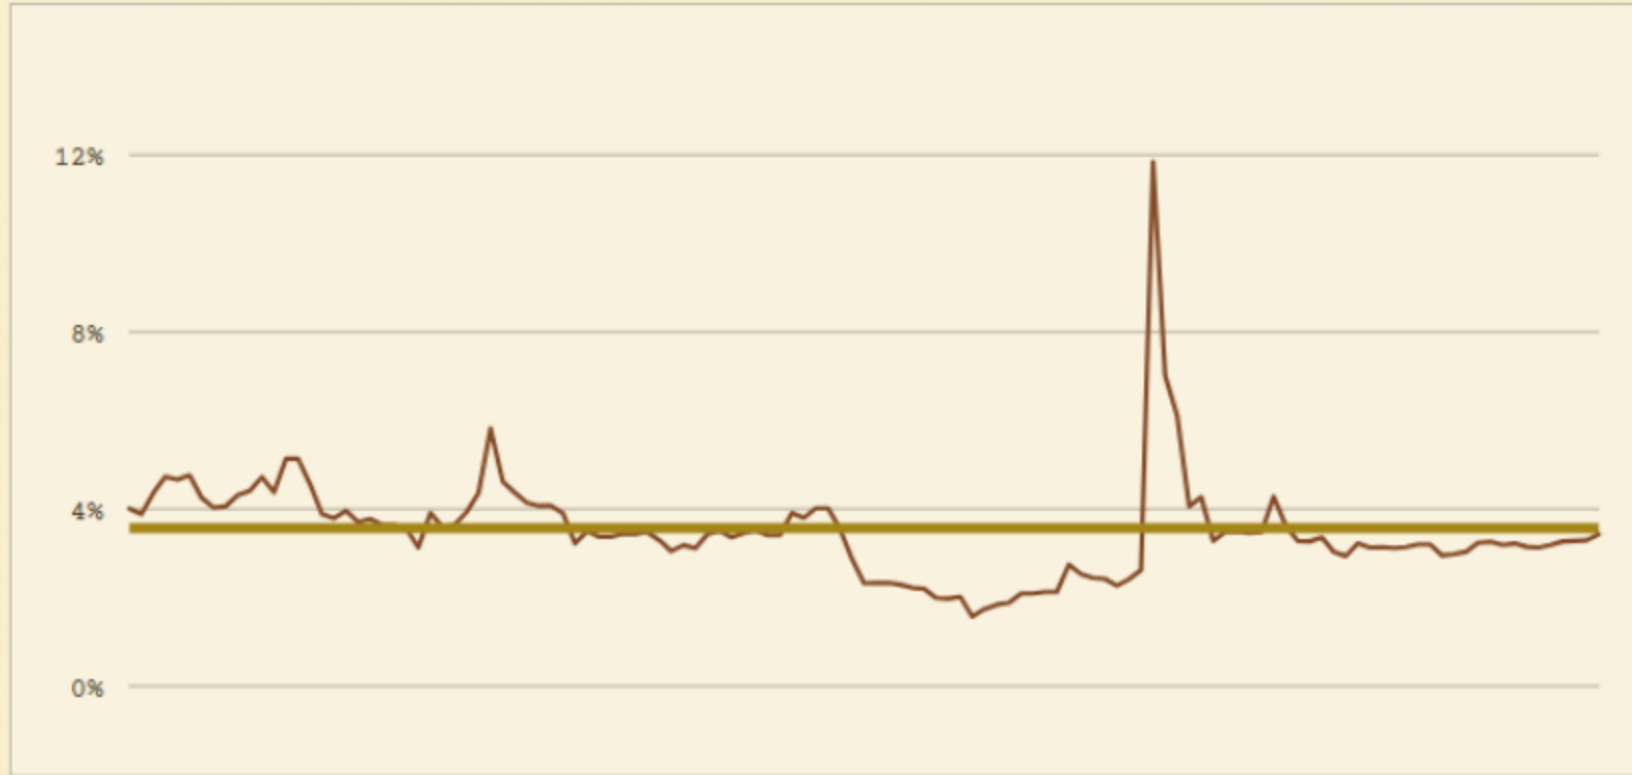

A treasury team needs cash
for a known period

The rate can change while
the position stays open.

The interest budget remains uncertain.

Illustrative treasury situation. Rates can rise or fall.

Rates can move

— Illustrative fixed rate — not a Symbolon quote

— Aave V3 USDC on Ethereum — the variable lending rate, as it happened

10 Aug 2025 – 8 Aug 2026 · [DefiLlama](#)

A fixed bill before settlement

1,000 USDCx-demo for 30 days

Lender offer	Annualized APR	Contractual repayment
Lender A	5.20%	1,004.33 USDCx-demo
Lender B	5.80%	1,004.83 USDCx-demo

The borrower chooses the funded quote.

Illustrative quotes. Simple ACT/360 interest, rounded to two decimals. Fees are separate.

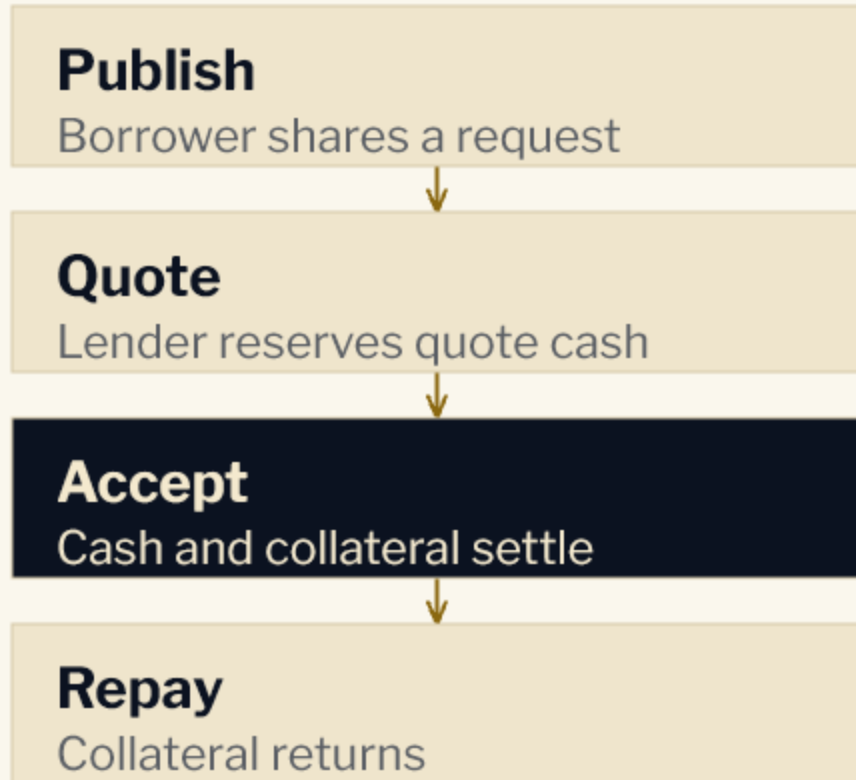

Why Canton

One agreement governs
cash against collateral

Record	Who can see it
Open financing request	Authenticated Symbolon users
A lender's quote	That lender and the borrower
Accepted position	Borrower and winning lender

Issuers see their holdings and movements. Application and participant operators remain trust dependencies.

The financing flow

Send a funded quote Close

Quote privately to **borrower · c685**. Other lenders cannot see your APR or offer.

Cash requested	Collateral	Duration
1,000.00 USDCx-demo	0.0250 cBTC-demo	30 days

Fixed APR (%)

Offer valid (minutes)

7

60

Simple annual interest · ACT/360

Available cash	Fixed interest	Borrower repayment
14,509.50 USDCx-demo	5.8333333333	1,005.8333333333 USDCx-demo

► Full financing terms and identities

☒ Reserve 1,000.00 USDCx-demo for this private funded offer. Cash remains reserved until acceptance, decline or revocation; expiry alone does not release it.

Reserve cash and send quote

Actual DevNet quote review. Quotes require a distinct lender party.

Collateral still needs attention

Illustrative position	Collateral	Health factor
At a 60,000 mark	0.0250 cBTC-demo	1.43
At a 36,000 mark	0.0250 cBTC-demo	0.86
After a 0.0050 top-up	0.0300 cBTC-demo	1.03

Repayment stays at 1,004.33 USDCx-demo

1,000 principal and 105% maintenance cover. Simulated marks and assets. Early closure pays the full agreed amount.

What we have demonstrated

Shared DevNet

Open request, funded quote, settlement
and repurchase with committed receipts

Early human feedback

1 borrower episode and approximately 3–5 informal app explorers

Simulated assets. Tester count and completed steps remain unrecorded. ICP fit, willingness to pay and pilot commitments remain open.

Business model

0.1% of interest

From the borrower and from the lender

Illustrative interest	Fee from each side	Total protocol fee
5,000 USDCx-demo	5 USDCx-demo	10 USDCx-demo

Intended model. Fee collection is not implemented in the demo. Current protocol fees and revenue are zero.

The next 90 days

Weeks 1–4

Operator discovery

8 relevant interviews
3 observed walkthroughs

Weeks 5–8

External rehearsal

1 borrower and lender pair
Asset and oracle feasibility

Weeks 9–12

Pilot decision

3 external simulated cycles
Operational release gates

Planning targets. First channel: Canton ecosystem introductions and direct treasury outreach. Native assets require adapters and approvals.
